

WATER CONSERVATION

WAYS TO CONSERVE WATER

Water is life! Water conservation practices will ensure that more people have access to safe water. Practicing the water wise tips you will be contributing towards ensuring an adequate, safe and sustainable water supply to everyone.

A In the kitchen:

- Avoid washing vegetables under running water.
- Don't wash or rinse dirty dishes under running water.

B When washing clothes:

- Wash full loads only and use the shortest cycle.
- Frontloader washing machines use 40% less water.

C In the bathroom:

- Use less water when bathing. Take a quick shower instead of a bath.
- Turn off the tap while brushing your teeth or shaving. This saves between 20-45 liters of water.
- About 75% of indoor home water use occurs in bathrooms, and toilets are the single largest water users. Toilets use over 40% more water than needed.

D In the garden:

- Water plants early in the morning or late in the evening. Reduce the area under grass.
- A watering can or hose is the best for watering small areas. Practice water wise tips! In the summer gardening watering can increase the demand for water by more than 50%.

E Outside:

- Using a bucket of water to clean the car instead of the hose. Saves about 300 liters of water.
- A dripping tap (one drop per second) waste up to 30 liters of water an hour. This means you are wasting 10 000 liters of water each year.
